ABSTRACT OF THE DISCLOSURE

Apparatus and Method to Control Self-Timed and Synchronous Systems

An apparatus includes a substrate, a target timing circuit, a leakage timing

5

are formed on the substrate. The target timing circuit has a target timing circuit frequency related to a target frequency. The leakage timing circuit has a leakage timing circuit frequency related to a leakage current. The control unit maintains a substantially constant ratio between the target timing circuit frequency and the leakage timing circuit frequency. A method includes generating a first signal related to a target circuit frequency, generating a second signal related to a leakage current,

and adjusting a control signal applied to a substrate to maintain a substantially

constant frequency ratio between a first signal and the second signal.

circuit, and a control unit. The target timing circuit and the leakage timing circuits
